Key Insights

- Risk is seasonal: lead-time risk peaks at about 12% in Mar–Apr and falls to about 0.2% in Sep–Oct.
- Demand swings about 3x (76K units in Sep vs 232K in Mar) while average inventory stays roughly flat.
- Warehouses and regions look alike (about 5% below reorder everywhere), so timing matters more than location.
- SUP_3, SUP_2 and SUP_8 have the highest High Risk share (1.5–1.7% vs 1.29% overall): review first.
- Risk is an estimate, not a recorded stockout. The dataset is synthetic.
